Century in the High School Program Demographics

- 800 students
- 30 Mentoring Partnerships Annually
- 3 Districts
- 1 Charter High School
- 1 Career and Technical Education Center
- 5 Liberal Arts Courses (Music, Math, Reading)
- 23 Career and Technical Education Courses

Concurrent Enrollment Workflow Process

The following flowchart shows you the Concurrent Enrollment eForm workflow process. Each box shown below represents an assigned task. The faculty assigned tasks are detailed below in the yellow boxes.

AgilePoint NX

AgilePoint, Inc. is a privately held company based in Mountain View, CA. The company has been in business since 2003 and has over 100 employees. **AgilePoint NX** is an independent Enterprise-Class Business Process Management Suite (BPMS) web-based application that allows an organization to design, implement, and improve a set of activities that accomplishes a specific organizational goal.

Why AgilePoint?

Back in 2014, Microsoft announced that they would be discontinuing InfoPath, their electronic form building application in 2023. As a result, Century College purchased AgilePoint NX (On-Premises) to replace their InfoPath forms.

What kind of technology and support does Century have in place for AgilePoint?

Servers

Since Century has a development and production environment for our AgilePoint eForms, we house AgilePoint each environment in separate virtualized servers, running Windows Server 2012 R2.

Software Administrator

Maintains, configures and updates AgilePoint and application server(s).

eForm Builder

Manages eForm projects, builds eForm apps, manages apps, and provides training.

Development Team (optional)

Assists with creating SQL databases or tables and coding (PowerShell commands, JavaScript, CSS).

What kind of AgilePoint app features and services does the Concurrent Enrollment app have?

- Auto-fills Century employee information (data is drawn from an employee SQL database table).
- Advanced form controls like the Upload control, which allows user to upload files in a form.
- Conditional logic workflow rules and routing capabilities that streamline the workflow processes.
- Email automation (e.g., confirmation, notification, reminder).
- Automatically creates Word version of faculty and high school teacher agreements after task completion.
- Generates an eForm URL to view a read-only copy of combined task forms.
- SharePoint integrations automatically adds form data to a SharePoint list that allows users to track the progress of a proposal and stores agreements/uploaded files into document libraries.

What other app building features and services does AgilePoint offer?

- Drag-and-drop interfaces (e.g., pre-built activities) that allow users to create forms, workflows, and mobile apps.
- Integration of data from collaborative applications like Active Directory, SharePoint, and OneDrive.
- Customizable process model activities, form field controls, and global data variables.
- Responsive design and characteristics make it possible for users to build an app in desktop or mobile view.
- User interface portal provides users and admin with a place to build apps, manage apps, generate reports, update user settings, and maintain system configurations.
- Interactive user dashboard that provides real-time app information (e.g., assigned tasks, open processes).
- Multiple application support resources (online support, telephone support, online documentation and knowledge base, online community forum, and mentoring services).
